SUMMARY

Computer Engineering student at GUC with experience in backend microservices, AI systems, and embedded development. Built scalable Spring Boot architectures, multimodal AI platforms, and real-time IoT systems, with a strong focus on cybersecurity and distributed systems.

EDUCATION

German University in Cairo (GUC), Bachelor of Computer Engineering 2022 – 2027

SKILLS

Languages (Programming)	Python, Java, C++, JavaScript
Backend	Spring Boot, Spring Cloud, Microservices, REST APIs, MySQL
Web	MERN Stack, React Native, EJS
AI & Systems	Computer Vision, Speech Recognition, IoT, Embedded Systems
Tools	Git, GitHub, Postman, Maven, MQTT
Languages (Spoken)	English (Fluent), German (Intermediate), French (Intermediate)

EXPERIENCE

Backend Developer Intern Jul 2025
Ejada Systems Ltd. – Egypt Branch *Cairo, Egypt*

- Designed and implemented 3+ RESTful microservices (Wallet, Shop, Inventory) using Spring Boot and Spring Cloud.
- Implemented service discovery and inter-service communication using Eureka and Feign, enhancing system resilience with Resilience4j.
- Centralized configuration using Spring Config Server, reducing deployment complexity.
- Collaborated in Agile sprints with code reviews, testing, and CI workflows using GitHub.

IT/Cyber Security Engineer Intern Aug 2024
First Abu Dhabi Bank Group (FAB) *Cairo, Egypt*

- Monitored network traffic and performed threat detection using enterprise cybersecurity tools (Deep Security Manager, Apex Central, IDS/IPS).
- Conducted web and network security assessments, identifying vulnerabilities and strengthening system defenses.
- Recognized among top-performing interns for technical accuracy and reliability.

PROJECTS

Multimodal Smart Home Interactive System (Bachelor Project) 2026 – *Ongoing*

- Built an AI-driven smart home system integrating computer vision (MediaPipe, DeepFace) and speech recognition (Whisper).
- Developed IoT control using ESP8266 and MQTT with real-time device interaction.
- Designed a multimodal decision system with conflict resolution and room-level session management.
- Integrated system with a Flutter mobile application for real-time user interaction.

Ejada E-commerce Microservices (Internship Project) 2025

Developed a distributed e-commerce backend using Spring Boot and Spring Cloud, consisting of three microservices (Wallet, Shop, Inventory). Implemented service discovery, inter-service communication, and fault tolerance using Eureka, Feign, and Resilience4j, with centralized configuration and MySQL integration for scalable deployment.

Campus Events & Facilities Platform (MERN) 2025

Architected a full-stack platform using MongoDB, Express, React, and Node.js supporting multi-role access (students, staff, vendors, admins) with secure authentication and email verification. Implemented event management, facility booking, vendor onboarding with document validation, and Stripe payment integration; recognized among best UI/UX projects.

Bio-Lab Escape Room System (Embedded Systems Project) 2025

Built an embedded system using Raspberry Pi Pico W and C for an interactive escape room, integrating sensors and real-time hardware-software control. Developed signal-based input handling and a web interface for live monitoring and interaction; awarded **1st Place** in the Embedded Systems Fair.

2D/3D Games Development (OpenGL) 2025

Developed interactive 2D and 3D games in C++ using OpenGL, implementing real-time rendering, camera systems, lighting models, animation, and collision detection across multi-level environments.

Internship Management System (Frontend Prototype) 2025

Designed a responsive frontend prototype using React and JavaScript to streamline internship applications, enrollment, and evaluation workflows. Focused on intuitive UI/UX design, incorporating feedback from product requirements to enhance usability and navigation.

Attack on Titan Game 2024

Developed a tower defense game in Java using JavaFX, featuring dynamic enemy behavior, multi-lane gameplay, and resource management mechanics.

Telecom Customer Data Management System 2024

Designed and implemented a database-driven system using SQL and ASP.NET to manage customer data, service plans, billing, and support operations.

Smart Study Desk (FPGA Project) 2024

Built an FPGA-based smart desk using VHDL and ModelSim, integrating sensor-driven automation for lighting and drawer control with real-time display output.

Travel Website (Client-Server Web App) 2024

Developed a full-stack web application using Node.js, Express, EJS, and MongoDB, supporting user authentication, personalized travel lists, and dynamic search.

ACHIEVEMENTS

Powerlifting Competitions Cairo, Egypt

- 1st Place — WPC World Cup 2025 (Full Power Category).
- 1st Place — Universities Deadlift Championship (2023–2025).
